

Reduce repair, fuel and breakdown costs with TPMS

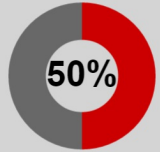

A whopping 33 per cent of fuel usage is created by tyre rolling resistance

Just 17 per cent of fuel usage is the result of mechanical friction

50 per cent of resistance is the result of aerodynamic resistance

Repair costs

Tyre Pressure Monitoring Systems (TPMS) can reduce breakdowns and associated repair costs, reduce the risk of fire and increase tyre lifespan.

Manage fuel costs

TyrePal's TeleTPMS allows central offices to manage fuel costs easily from a central point. It reports data directly from each vehicle to a central hub, providing a second line of defence for tyre safety

Reduce breakdowns

Tyre failure is the biggest reason for breakdown of commercial vehicles. In addition to the direct cost of call-out, it leads to disruption of schedules and poor customer service.
